Senstar Introduces the FiberPatrol FP1150

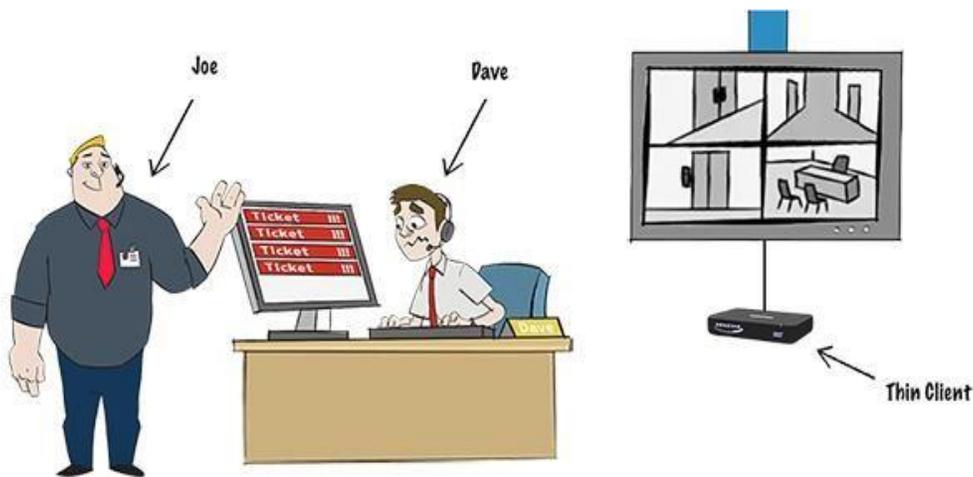

Senstar is pleased to announce the FiberPatrol FP1150, the newest addition to its fiber optic perimeter intrusion detection line. The dual-channel FP1150 accurately detects and locates intrusion attempts for up to 10 km (6.2 mi) or 5 km (3.1 mi) per side in a platform that is more compact, more highly integrated, and more rugged than previous generations.

The FP1150 enhances the market-leading capabilities of the Senstar's FiberPatrol line by extending the operational temperature range to 50°C (122°F), making the system more robust by using solid-state disk drives, and integrating previously-external optical modules – all while shrinking the system into a single 4U rack-mount enclosure and adding lower-cost options for shorter perimeters.

Meet Joe. Meet Dave. Meet Thin Client.

Joe works security. Joe needs to see live video from the building's cameras. Sometimes he wants to playback and export video. He needs a no-fuss solution that just works.

Dave works IT. He wants to help Joe but doesn't have time to maintain yet another PC. PCs require licensing, training, maintenance, anti-virus software, and never-ending updates.

Thin Client, from Senstar, makes life easier for both Joe and Dave. The compact appliance displays live video from ONVIF/RTSP-compliant camera streams. Pair it with the Senstar Symphony VMS and it offers easy playback and export. Thin Client is simple to install and virtually maintenance-free.

Senstar Symphony Supports GDPR Compliance

The General Data Protection Regulations (GDPR) apply to all European Union members as well as all foreign companies that process EU resident data. GDPR harmonizes the regulatory environment regarding data privacy and provides EU residents with the right to learn how their personal data is used as well as the right to view their personal data. Video surveillance operators are directly affected by these regulations as recorded video of identifiable people is considered personal data.

Senstar's Symphony video management software (VMS) provides a set of privacy-related features that support organizations with GDPR compliance while maintaining situational awareness and operator efficiency.

*Disclaimer: Senstar Symphony™ assists "Data Controllers" and "Data Processors" to meet GDPR regulation, however it does not make video surveillance GDPR compliant. It is recommended that legal advice is sought to ensure full compliance.

Cyber Security Guide: Physical Security and the Internet of Things

The Internet of Things (IoT) is growing at an unprecedented rate, with potentially over 20 billion devices being online by the end of 2020. The risks posed by IoT devices, including IP-based surveillance cameras, necessitate a convergence between the physical and cyber security realms.

Download our free ebook for practical information on how to protect your physical security networks from IoT botnet and other attacks.

Upcoming Training

Senstar provides technical training for our Perimeter Intrusion Detection Systems (PIDs) and Video Management Systems (VMS) and analytics products. Classes are designed for new and existing system integrators, distributors, system administrators, and end users. They cover the design, installation, setup, and troubleshooting of our products in a hands-on classroom setting.
