

# Senstar LM100™

Hybrid Perimeter Intrusion Detection and Intelligent Lighting System

## 6 YEAR TOTAL COST OF OWNERSHIP COMPARISON

The Senstar LM100 is the world's first 2-in-1 perimeter intrusion detection and intelligent lighting system. Combining two key security functions in one cutting-edge product, the LM100 is a powerful deterrent for intruders – detecting and illuminating them at the fence line while alerting the site's security system.

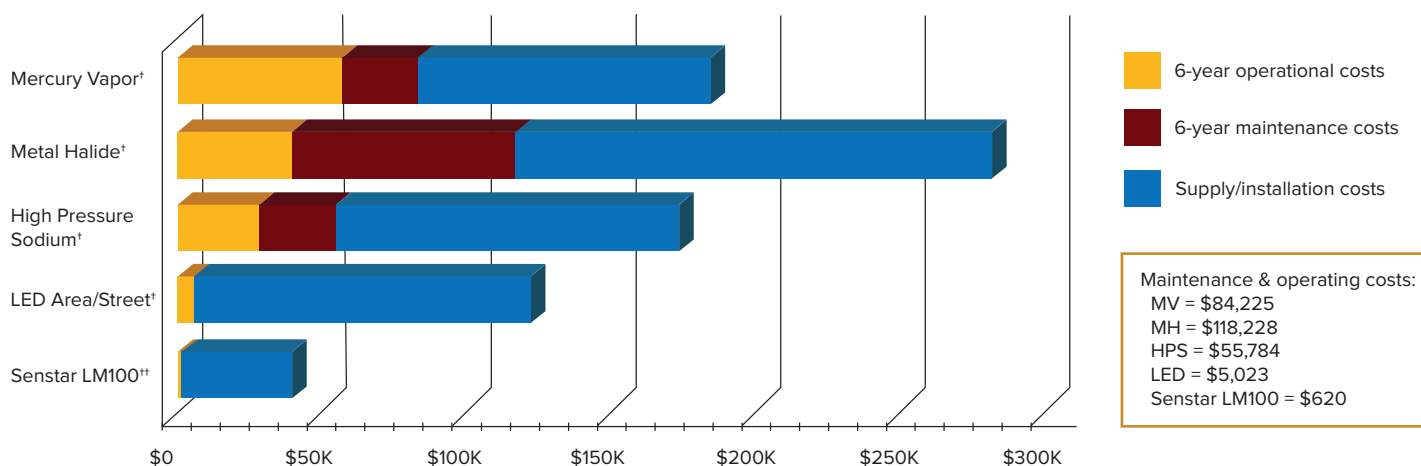

### The Senstar LM100 lights the way to saving money!

With its ultra-efficient LED technology, simple installation, and long lifespan, the Senstar LM100 provides a Return On Investment (ROI) far exceeding that of traditional perimeter security lighting. By virtually eliminating maintenance costs and drastically reducing electricity usage, the Senstar LM100 has the **lowest Total Cost of Ownership (TCO) of any perimeter security lighting solution.**

The following graph compares the 6-year TCO of current perimeter security lighting technologies. These costs take into account material, installation, operating, and maintenance costs over a 6-year period and are based on a 600 m (0.37 mi) fence perimeter.

### The Senstar LM100 has a payback period of 2–4 years

(depending on technology being replaced)

Electricity cost assumes 11¢/kWh. \* Based on 30-foot lighting standard used for HPS, MH, MV and LED area lighting. \*\* Civil cost at \$20/hour for installation.
